Education

University of Texas, Austin

Ph.D. in Mathematics (in progress)

University of California, Berkeley

B.A. in Mathematics

Honors thesis title: Non-sectorial gluing of Fukaya categories

Research Interests

Algebraic geometry, mirror symmetry (2d and 3d), geometric Langlands, category theory, symplectic geometry, homotopy theory, low-dimensional topology.

In the past I have studied computational models of nuclear fission.

Research Experience

Rozansky-Witten theory and the metaplectic anomaly

UT Austin Fall 2019-Present

Under the guidance of Professor David Ben-Zvi, I have been thinking about Rozansky-Witten theory. Specifically about the details involved in extending it down to a point. Some specific things I work with are sheaves of categories, anomalies, and higher gerbes.

Undergraduate senior thesis:

UC Berkeley Fall 2018, Spring 2019

Under the guidance of Professor Vivek Shende, I used microlocal sheaf theory, homotopy theory, and other tools to study certain symplectic manifolds arising in low-dimensional topology. This resulted in two works in preparation [5, 6].

Research project on Dean's Scholarship:

University College London Summer 2017

I was awarded the Dean's Summer Scholarship at UCL for the summer of 2017. **This opportunity was effectively equivalent to an REU.** I completed a research project under the supervision of Professor Michael Singer investigating the asymptotic behavior of partial density functions on hermitian line bundles. My particular work primarily involved Kähler geometry and complex analysis, and resulted in some original contributions [3].

Fission Reaction Event Yield Algorithm:

Lawrence Berkeley National Laboratory

Spring 2017 - Present

2019-Present

2015-2019

Over the past year I have worked on developing an analysis methodology that allows us to fix the parameters in the fission simulator FREYA.

Honors and Awards

Frank Gerth III teaching excellence awards:

Fall 2019-Spring 2020

Departmental awards which are "given each year to students who are proven teaching assistants or assistant instructors."

NSF Graduate Research Fellowship Program (honorable mention):

Spring 2020

Dean's Honors List - College of Letters and Science:

UC Berkelev

Spring 2018-2019

The Dean's Honors List recognizes outstanding academic achievement of students with semester GPA in the top 10% of L&S undergraduates.

International Dean's Summer Scholarship:

University College London

Summer 2017

I spent the summer of 2017 doing research under Professor Michael Singer with support from the International Dean's Summer Scholarship from UCL. This is analogous to an REU opportunity in the United States.

Teaching Experience

Assistant instructor (IBL format):

Topology I

University of Texas, Austin

Fall 2020

This course implemented the **inquiry based learning (IBL)** method. This is a successful contemporary teaching technique which is particularly well-represented at UT. The class was separated into two halves, which would meet separately. I taught one half, and the other assistant taught the other half. **My responsibilities included:** independently holding class over Zoom, grading exams, and managing an IBL-based in-class discussion every day. I developed my IBL-style teaching techniques with the help of Professor Michael Starbird and other IBL resources at UT.

Teaching assistant:

Multivariable Calculus, Series, Sequences

University of Texas, Austin

Fall 2019, Spring 2020

I held section, wrote and administered quizzes, graded assignments, and held office hours.

Undergraduate Student Instructor:

Calculus, ODEs, Linear Algebra

University of California, Berkeley

Fall 2018

I held section, wrote and administered quizzes, graded assignments, and held office hours.

Summer Program in Nuclear Physics:

University of Oslo, Oslo, Norway

May 2017

I helped developed the curriculum for, and teach a course concerning the physics of nuclear fission and our ability to model it. This happened in conjunction with my research in theoretical nuclear physics developing the fission event algorithm FREYA.

Outreach

Sunday Morning Math Group:

UT Austin Spring 2021-Present

I began running the Sunday Morning Math Group (SMMG) in Spring 2021. The SMMG is a UT sponsored outreach program aimed at junior high and high school students. The AMC and AIME exams are also hosted by the SMMG. My responsibilities include organizing and hosting 6-8 public "general sessions" for the community, organizing the AMC and AIME, returning exam scores, and other miscellaneous organizational responsibilities. Note that I took and held this position during the COVID-19 pandemic, meaning I had the extra experience of arranging an online version of all of the above events.

Directed reading program:

UT Austin Fall 2019-Present

The DRP is an RTG program of the Department of Mathematics at the University of Texas at Austin. DRP pairs undergraduate students with graduate student mentors to undertake independent projects in mathematics. So far, I have mentored three students who completed high-level projects by the end of the semester.

Seminars organized

Jr. Geometry seminar

UT Austin Spring 2021

Talks Given

• The structure of \mathcal{M}_{FG} , Chromatic Homotopy Theory Seminar UT Austin

Spring 2021

• Higher-dualizability, **Juvitop**MIT

Fall 2020

• Geometric Representation Theory Seminar

UT Austin

Fall 2020, Spring 2021

- Wall crossing functors and \mathcal{D} -modules
- Singular support of constructible sheaves

• Junior Geometry Seminar

UT Austin

Spring 2020, Fall 2020, Spring 2021

- Algebraic geometry and topological field theory
- Algebraic geometry in machine learning
- The categorical Weil representation

• Basic algebraic geometry seminar

UT Austin

Spring 2020, Fall 2020, Spring 2021

- Spherical varieties
- Sheaves on stacks
- The Weil conjectures

• Junior Geometry and String Theory Seminar

UT Austin

Fall 2019, Spring 2020, Fall 2020, Spring 2021

- Introduction to the A-model
- Higher motion groups
- Anomalies
- Shifted geometric quantization

• Triangulation conjecture Seminar

UT Austin Fall 2019

• Partial density functions and Hele-Shaw flow **Scholarship Project Presentation** University College London

August 2017

• University Program Review (UPR) Presentation University of Michigan, Ann Arbor

June 2018

• Nuclear Fission Conference (NA22 collaboration): Santa Fe, NM

March 2017

Conferences Attended

 (∞, n) -categories, factorization homology, and algebraic K-theory:

MSRI, Berkeley CA March 23, 2020 - March 27, 2020

Tensor categories and topological quantum field theories:

MSRI, Berkeley CA March 16, 2020 - March 20, 2020

New Perspectives in Gromov-Witten Theory:

IMJ-PRG, Sorbonne Universit, Paris

June 3 - June 7, 2019

Princeton Summer School in Low-dimensional Topology and Symplectic Geometry:

Princeton University, Princeton, NJ June 11 - June 29, 2018

Enumerative Geometry Beyond Numbers:

MSRI, Berkeley CA January 22, 2018 - January 26, 2018

Skills

Type-setting: I have been typesetting all of my assignments and notes with LATEX for multiple years. I take a large majority of my notes in real time.

Computer science: High level: Python, Low-level: C++, fortran, bash. I have also worked extensively with clusters and techniques such as parallel processing for working with computationally intensive projects. Specifically I have had experience with both computational geometry and analysis of large data sets.
